^ Certification Status indicates if a project has achieved certification, the stage in which it earned certification, its certification level, and certification date. The stages are defined below.

For the complete definitions, please refer to the LEED for Neighborhood Development Rating System.

Stage 1 (Optional Pre-Review): Available but not required for projects at any point before the entitlement process begins. The indicated Level of Certification represents the anticipated certification level in latter stages.

Stage 2 (Certification of an Approved Plan): Available and required after the project has been granted any necessary approvals and entitlements to be built to plan.

Stage 3 (Certification of a Completed Neighborhood Development): Available and required when construction is complete or nearly complete.

* Stage Currently Attempting indicates which stage of certification the project is currently attempting during the pilot program.

** Financial aid recipient; pilot registration fees for these projects were partially or wholly covered by a grant from the Kresge Foundation.

If a project has elected to be contacted by the public, their contact information is provided.
